Summary

Senior Software Engineer with 3+ years of experience designing and building backend systems, REST APIs, and microservices that serve 100,000+ users, using Node.js, NestJS, TypeScript, JavaScript, MySQL, MongoDB, Redis, BullMQ, Kafka, and AWS. Delivered 25+ production projects spanning distributed systems, system design, API architecture, performance optimization, authentication/authorization, and cloud-native application development. Experienced in leading engineering teams, mentoring developers, conducting code reviews, and shipping production software on schedule.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Java, SQL
Backend & Frameworks: Node.js, NestJS, Express.js, REST APIs, Microservices, System Design, Distributed Systems
Databases: MySQL, MongoDB, Database Design, Query Optimization, Indexing, Transactions
Messaging & Caching: Redis, BullMQ, Apache Kafka, Event-Driven Architecture, Async Processing
Security & Auth: JWT Authentication, RBAC, Passport.js, Guards, Interceptors, DTO Validation, Custom Decorators
Cloud & DevOps: AWS S3, AWS CloudWatch, Docker, Git, GitHub, CI/CD, Version Control
Tools & Integrations: Postman, Razorpay, SAP Services, Third-Party APIs
Concepts: OOP, SOLID Principles, Design Patterns, Data Structures, Algorithms, Agile Development

Experience

Tech Almond Solutions Pvt. Ltd. Apr 2023 – Present
Senior Software Engineer II (Previously Senior Software Developer, Software Developer and Intern) *Gurugram, India*

- Led backend development of a rewards platform serving **100,000+ users** using Node.js, NestJS, TypeScript, Redis, BullMQ, MySQL, and MongoDB while leading a **9-engineer team**.
- Designed **20+ REST API endpoints** across microservices and distributed backend systems, improving maintainability and reliability.
- Improved API response time by **40%** through query optimization, indexing, request validation, and caching strategies.
- Created a rewards and redemption engine supporting **15+ configurable business rules** and multi-level approval workflows, automated via scheduled cron jobs.
- Built asynchronous, event-driven workflows using Redis, BullMQ, and Kafka, processing **10,000+ background jobs daily** for invoice approval and notifications.
- Engineered a reusable NestJS backend boilerplate with DTO validation, Guards, Interceptors, centralized exception handling, and structured logging, reducing development time by **30%** across new projects.
- Optimized MySQL and MongoDB database schemas and complex queries, reducing average query latency by **35%**.
- Implemented secure authentication and authorization across **10+ microservices** using JWT, RBAC, Passport.js, and custom decorators.
- Integrated AWS S3, CloudWatch, Razorpay, SAP services, and **6+ third-party APIs** into production applications.
- Reviewed code across the team, mentored **10+ junior developers**, and resolved critical production issues.
- Managed **50+ production deployments** with **99.9% uptime**, earning promotion from **Software Developer Intern** to **Software Developer** and subsequently to **Senior Software Developer** within **2 years**.

Urban Company Feb 2023 – Apr 2023
Engineering Intern *Gurugram, India*

- Shipped **10+ backend features** and REST API enhancements in a Node.js environment, collaborating with a cross-functional team in an Agile workflow.
- Authored and executed **50+ test cases** to validate API functionality, and diagnosed production issues alongside senior engineers.

Projects

Enterprise Rewards & Redemption Platform | *Node.js, NestJS, TypeScript, MySQL, MongoDB, Redis, BullMQ*

- Implemented the transaction and approval-routing logic powering redemption flows for **100,000+ platform users**, using NestJS services with MySQL for state and MongoDB for audit logs.
- Cut peak-load API latency through connection pooling, targeted indexes, and Redis-backed caching, reducing repeat database reads on high-traffic redemption endpoints by **60%**.

Reusable NestJS Backend Boilerplate | *NestJS, TypeScript, Guards, Interceptors, DTO Validation*

- Architected a NestJS starter framework adopted across **5+ teams**, packaging authentication, validation, and error-handling patterns into reusable modules.
- Pre-configured logging, environment setup, and database connection handling in the base template, cutting new-project bootstrap time by **50%**.

Event-Driven Invoice & Notification Workflow | *Kafka, Redis, BullMQ, Node.js*

- Designed the queue topology and message schemas for an event pipeline processing **5,000+ invoice and notification events daily** across Kafka topics and BullMQ queues.
- Added retry and dead-letter handling for failed jobs, reducing job failure rate by **25%** under load.

Education

Meerut Institute of Engineering and Technology Jul 2018 – Jun 2022

B.Tech in Information Technology *Meerut, Uttar Pradesh*
